Art Unit: 3748

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. § 103(a) as being unpatentable over JP 05-296009 (Yamanishi et al) in view of U.S. 4333515 (Wilkinson et al). Yamanishi et al discloses an exhaust heat recovery system comprising a steam turbine 2, a condenser 4 acting as a heat exchanger as claimed, an evaporator 5c for a refrigerator 5 comprising a heat pump. Yamanishi et al does not disclose the compression heat pump type being used. Wilkinson et al is relied upon to disclose it's well known to use compression heat pump in a waste heat recovery system of a steam turbine plant (note column 1). It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use compression heat pump in the system of Yamanishi et al as taught by Wilkinson et al for the purpose of more effectively generating electricity.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Maeda discloses a waste heat recovery system using compression heat pump.
